**Please Note:**

- You can add 10-20 minutes of a warm up walk to any workout under 3 miles. Try to mix walking breaks into the run – going the distance is your main objective. A good strategy is to run 2-5 minutes, walk 1 minute.
- You can run 3 or 4 days a week and do the low or high end of the mileage ranges depending on how you feel that day. Pick up where you've left off and you'll do fine
- It's recommended to do a couple of tune up races before the half marathon to gain valuable race experience.
- Recovery weeks are built in to make sure you stay healthy and fresh enough for race day.

### Quick Reference Guide

**Training Phases**

- Endurance Phase: main goal is to slowly build up endurance. Avoid speed work / very little hills.
- Strength Phase: to add strength by doing one hilly course a week.
- Peak Phase: to allow your body to recover and rejuvenate for the target race.

**Key Terms**

- O = Off Day/Complete Rest/ No cross training.** Active recovery such as self massage recommended.
- C = Cross training.** Strength training that works the hips/glutes/core is strongly recommended 1-3 times a week to lower the risk of injury. You can also do aerobic activities such as swimming or spinning for 20-40 minutes.
- R = Recovery Workout.** Very relaxed effort over flat terrain (track / trail or walk hills on favorite route) for short duration followed by a stretching routine to loosen up tight spots. Have fun!
- SL = Semi-long Workout.** After 2 mile warm up (very relaxed effort), settle into conversation effort.
- L = Long Workout.** After 2 mile warm up (very relaxed effort), settle into conversation effort.
- H = Hill Workout.** After 1-2 mile warm up, do a hillier than average route at conversation effort.
- + = And Optional.** C+R means to cross train with the option of also doing a recovery workout.
- / = Or.** C/O means to either cross train or take the day off.
